Translate all in one using ChatGPT SEO translation

Compatibility

PrestaShop 1.7.6 – 8.x

<u>Goal</u>

The module translates everything that can be translated, namely: all fields in products, categories, attributes, features, features, manufacturers, suppliers, CMS pages, e-mails, themes, other modules and admin-panel entities. All of these translations can be performed as a bulk action. It is possible both to select specific entities (for example, a product, category, or attribute) and on the configuration page to perform a bulk translation (for example all categories). All this works via ChatGPT AI!

Benefits for Merchants

- Managing all translations in **one place** using ChatGPT. **No need** for multiple **tools** or **platforms**; consolidate translation tasks for enhanced control.
- You can **translate everything**: fields in products, categories, attributes, features, feature values, manufacturers, suppliers, CMS pages, e-mails, themes, other modules and admin-panel entities.
- Effortlessly translate all translatable fields. Handle them all at once.
- Streamline translation efforts with the ability to perform **bulk actions**. Whether selecting specific entities or opting for bulk translation on the configuration page, the process is **user-friendly**.
- **Specific** entities (e.g., some categories) translation for absolute flexibility.
- Managing all translations in **one place** using ChatGPT. **No need** for multiple **tools** or **platforms**; consolidate translation tasks for enhanced control.
- Automatization of the translation process, reducing the manual workload and freeing up time.
- Cater to a global audience by translating content into multiple languages effortlessly.
- Elevate your website's search engine optimization with translated content
- User-friendly interface that simplifies the translation process. Intuitive design makes it accessible for merchants of all levels of expertise.

Benefits for customers

- Power of **ChatGPT** translation!
- Customers get clear and informative product details.
- Customers will find products effortlessly and enjoy an interface that transcends language barriers.
- Clients will feel empowered with a website that caters to their language preferences, creating a more inclusive and customer-centric online shopping environment.

Features

- Multilanguage compatibility
- **Content translating** for all shop entities (products, categories, attributes, attribute groups, features, feature values, manufacturers, suppliers) in **single or bulk mode**
- Adding or replacing a description, short description, and content of an entity
- Modules translation
- Themes translation
- Emails translation
- Backoffice translation
- Bulk translation options
 - Ability to choose the initial language from which the translation will be translated from
 - The possibility of choosing several languages into which the text will be translated

Parameters	ID	User Message		Chat Message	Date Add	

The first time you go to the module's **configuration page**, the ChatGPT settings menu will open, and you will be offered to enter an API key.

To start working with the module, you need to enter your ChatGPT API key.

You should create the ChatGPT key for using the module: <u>https://platform.openai.com/api-keys</u>

If an error occurs during the translation, it is possible to continue the translation.

It should be noted that it is also possible to see detailed information about the error when it is provided and if this error concerns the work of the module and not the ChatGPT API, then the error will be recorded in the error log that can be downloaded in the settings. More on this later.

There are also ChatGPT API request logs on the module configuration page. They are sorted in descending order, so the most recent requests will be right at the top.

This is very useful because you can see what goes into the translation and what is received as a result of the translation using the ChatGPT API

Localization Locations Taxes Translations ChatGPT Translator					+ A	dd Rule						Save	

The **FORCE TRANSLATION** feature allows you to replace words AFTER ChatGPT translation with words you specified. This is all implemented in the form of rules that can be applied to a specific language (or to all languages), enabled or disabled. It is also worth noting that the rules are applied in descending order, i.e. from top to bottom. If it's necessary to change their sequence, you can drag them as you need.

- Force Translaton determines whether this feature is enabled.
- Rules list of words that will be replaced after translation. For example, T-shirt > Shirt.
 - From word the word or phrase that will be replaced
 - **To word** the word or phrase that will be replaced with what is entered in the **From word** field
 - Lang Selector determines for which language the replacement rule will be applied
 - **Status Toggle** determines the status of the rule (whether the rule is enabled)
 - **Remove Button** deletes the rule
